

Team Members: Ernie Delp, Sean Forker, Katherine and Chuck Holderbee

We departed the Howard Johnson Hotel to the small town of Latrobe, to an area near where I had my "Bigfoot" experience in June of 2006. We decided to Park at the Beach Area since most of the State Park was closed at this time – still out of season. This area is rich in Bigfoot activity, with copious reports dating back past the 1960s and still active to this day.

As the team departed the vehicles – we made our way across a bridge. We stopped at the center of the bridge on the lake. I began to conduct vocalizations, which prompted the ducks to go crazy – and heavy water crashing occurred. As we moved away, something was thrown at us and smacked against the guardrail. We pressed on across the road and onto the trailhead.

We hiked into the trailhead and down the trail for about 45 minutes, and came across several small foot shaped impressions. We photographed these. We have since decided that these were dog tracks that have been walked over – so the pictures stay, but the verdict remains. After hearing heavy brush movement – we went into a clearing off the trail, near a bench. It was in this area that we heard some return whoops to our calls – and silence of wildlife. We went dark, and felt we were being approached by something, yet it was staying out of view. An odd sent of rotting meat or rotting potatoes traced the air a few times. **Note of Interest: we used the K2 meters for the first time, and they went off to a high EMF reading when the brush breaking was heard.**

We decided to move out of this area – cross the bridge, and go back to the other side. As we moved across the road, Chuck saw eye shine in the tree line above the ridge. This eye shine, if corresponding to the same location as I saw it later, was about 7ft 3 in. off the ground. It was in this same location that we recorded a series of vocalizations and responses that we call "The Keystone Moan". The following is a chronology of the recording, and an attachment with that sound file is being sent with this report. I encourage you to listen to the audio file before reading the chronology as to not contaminate your thoughts.

The Keystone Moan Chronology – *Follow along with recording. Times listed are the actual number of minutes into the recording, marking that sound file.*

0:05: Ernie wood knocks, Sean follows with some intense wood knocks exiting trailhead.

0:29: Chuck notices eye shine in tree line.

1:50: Sean conducts some whoop vocalizations lasting several seconds.

2:08: A return whoop is heard right at the end of Sean's vocalizations - do not confuse with echo.

3:00: All natural sounds cease.

3:12: Faint Moan heard in background.

3:19: Faint Moan heard again in background.*Somewhere between here and the next vocalization; Ernie notes this is his fourth vocalization that he heard.*

3:42: First loud audible vocalization is heard and recorded.

4:34: Vocalizations begin with Sean responding, and getting returns.

4:57 / 4:58/ 5:01/ 5:06/ 5:08/ 5:11/ 5:14/ 5:19: Return Vocalizations

7:14: Last Vocalization Recorded.

After the vocalizations ceased, we headed back to vehicles and began to the hotels, as it began to get chilly in the park.
